Exercise 10

1.   Exercise for GitHub Pages:

- Write a simple resume webpage describing a virtual person (like ex-10-1-example.html).
- Commit and Push the code and resources to GitHub.
- Configure the GitHub Pages.
- Provide your github-pages URL on TronClass.

2.   Exercise for linking backend APIs:

Please write an NTOU news page (based on ex-10-2-partial.html) to get news data from
https://ntounews-12c3919cf8d0.herokuapp.com/news and render news as follows:

When the user clicks on the title, the browser will open a new window to display the news page.

Hints:

- You can refer to the "jQuery.get()" (https://api.jquery.com/jQuery.get/) API (front-end API) to know how to invoke the backend Web APIs. (ajax or fetch using pure JavaScript is OK)
- You can refer to "mrt-viewer.html" to know how to render data from the backend in a simple way.
- You can use the "String template" to ease the HTML fragment generation.
